List of countries by number of Internet users

Below is a sortable **list of countries by number of Internet users**, for 2020. Internet users are defined as persons who accessed the Internet in the last 12 months from any device, including mobile phones.[Note 1] Percentage is the percentage of a country's population that are Internet users. Estimates are derived either from household surveys or from Internet subscription data.[4]

All United Nations member states are included, except North Korea, whose number of internet users is estimated at a few thousand.[5]

Data from Statista and Internet World Stats estimates the total number of internet users in 2021 is between 4.3 billion to 5 billion active users.[6][7]

Notes

1. The statistics for numbers of Internet users were obtained by multiplying an estimated percentage of people using the Internet in a given country, obtained from one source (usually the ITU), by the total population from another source (usually the U.S. Census Bureau). There are not enough significant figures in the percentage estimate for the precise Internet user counts found in the table to be meaningful. As a result, they should not be treated as precise figures or even reliable estimates.
