

FibreIRS 2SATODU16

Fibre Integrated Reception System

- 2 Satellites distributed via a single fibre
- Outputs 2 satellites for distribution through 2 x 16 PON
- Fully weatherproof (IP65)

Fully weatherproof, the 2SATODU16 is designed for mounting at the antenna location. It accepts & combines signals from two wholeband LNB's & terrestrial antennas (DTT/DAB/FM). The combined signal is optically frequency modulated on to a laser inside the 2SATODU16 & then equally split to 2 optical outputs (FC/PC) for distribution through a Passive Optical Network (PON) of FibreIRS optical splitters. Each output of the 2SATODU16 can feed a PON of 16 points. Different FibreIRS GTU's can be connected at any point (Quad and Quatro available). Maximum distance 1km
