

# 1 CHR6

## 1.1 1.Creation de la VM

### Creation d'une Nouvelle VM :

- OS Type Linux 5.x - 2.6 Kernel
- Processeur : 1 sockets, 2 cores
- SCSI Controller : VirtIO SCSI
- Network Device : virtio
- Mémoire : 1Gb
- Ballooning = 0
- virtio block device storage, 1 core , 256mb, 2 Interface reseau (WAN+LAN)

**Warning:** We do not recommend using E1000 network interface if better synthetic interface options are available on specific Hypervisor!

### Noter le N° de la VM qui vient d'être créé.

Dans mon cas 106

### Virtual Network Adapters

Fast Path is supported since RouterOS v7 for "vmxnet3" and "virtio-net" adapters.

RouterOS v6 does not support Fast Path.

Create: Virtual Machine

General	OS	System	Hard Disk	CPU	Memory	Network	Confirm
<input type="radio"/> Use CD/DVD disc image file (iso) Storage: ISO ISO image:	Guest OS: Type: Linux Version: 5.x - 2.6 Kernel						
<input type="radio"/> Use physical CD/DVD Drive <input checked="" type="radio"/> Do not use any media							

Create: Virtual Machine

General	OS	System	Hard Disk	CPU	Memory	Network	Confirm
			Bus/Device: VirtIO Block Storage: local-zfs Disk size (GiB): 1 Format: Raw disk image (raw)		Cache: Default (No cache) Discard:		
							SSD emulation: <input type="checkbox"/> Backup: <input checked="" type="checkbox"/>

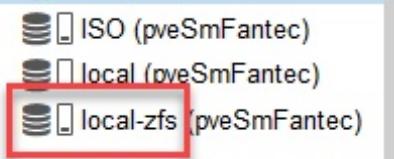

## 1.2 2.Install CHR

### Setting up a CHR VM on proxmox with zfs :

Download CHR Raw image : <https://mikrotik.com/download>  
 wget <https://download.mikrotik.com/routeros/6.48/chr-6.48.img.zip>  
 unzip chr-6.48.img.zip

```
wget https://download.mikrotik.com/routeros/7.1beta4/chr-7.1beta4.img.zip
```

### Noter le nom du Storage utilisé pour stocker les VM:

### Trouver l'emplacement du local filesystem for VM's disk:

```
pvesm list <poolname> | grep <vmid>
pvesm list local-zfs | grep 106
```

```
root@pveSmFantec:~# pvesm list local-zfs | grep 106
local-zfs:vm-106-disk-0      raw      images    17179869184 106
root@pveSmFantec:~#
```

that will tell you the name of the disks attached to the VM

### Recuperer le chemin complet Disk RAW virtuel :

```
pvesm path local-zfs:vm-106-disk-0
root@pveSmFantec:~# pvesm path local-zfs:vm-106-disk-0
/dev/zvol/rpool/data/vm-106-disk-0
root@pveSmFantec:~#
```

copy the raw image to the raw virtual disk :

```
dd if=/path/to/chr/img of=/full/local/path/raw/virtual/disk e.g.,
dd if=/mnt/pve/foinix-proxmox-content/template/iso/chr-6.45.8.img of=/dev/zvol/mass/vm-139-d
```

```
dd if=/root/chr-6.48.img of=/dev/zvol/rpool/data/vm-106-disk-0
dd if=/root/chr-7.1beta4.img of=/dev/zvol/rpool/data/vm-114-disk-0
```

### Demarrer la VM

## 1.3 3.3.Guest-Agent (Enable)

### Menu Option

Use Tablet for pointer : No

QEMU Guest Agent : Use QEMU Guest Agent

OS Type	Linux 5.x - 2.6 Kernel
Boot Order	virtio0, ide2, net0
Use tablet for pointer	No
Hotplug	Disk, Network, USB
ACPI support	Yes
KVM hardware virtualization	Yes
Freeze CPU at startup	
Use local time for RTC	
RTC start date	
SMBIOS settings (type1)	
QEMU Guest Agent	
Protection	
Spice Enhancements	
VM State storage	

Si la VM tourne, l'arreter puis la Redemarrer pour que le réglage soit pris en compte.

Après qq seconde on peut voir apparaitre les infos dans le Summary de la VM :

IPs 192.168.10.1  
More

## 1.4 3.4.Demarrage Automatique

Une fois la config de CHR opérationnel, sous PVE pensez a cocher la case : Start at boot pour démarrer la VM automatiquement

**Start at Boot = Yes**

Console	Name	CHR
Hardware	Start at boot	Yes
Cloud-Init	Start/Shutdown order	order=any
Options	OS Type	Linux 5.x - 2.6 Kernel

## 1.5 Config Reseau

The screenshot shows the Proxmox VE interface. On the left, the 'Server View' sidebar lists Datacenter nodes (pveSmFante) and their virtual machines (103, 100, 101, 102, 104, 105, 106). The 'Network' section is selected. On the right, the main window displays the 'Virtual Machine 106 (CHR) on node 'pveSmFante''. The 'Hardware' tab is active, showing configuration details for memory, processors, BIOS, display, machine, SCSI controller, CD/DVD drive, hard disk, and network devices. The network section lists three bridges: vmbr0 (LAN), vmbr1 (WAN), vmbr2 (SFP-LAN), and vmbr3 (SFP-WAN).

### 1.5.1 Creation des Bridge sous Pve

Sous Pve dans System Network

Cliquer sur Create puis créer 2 Bridge (1 pour Chaque port de la Carte Fibre)

The screenshot shows the 'Edit: Linux Bridge' dialog box. Step 1: A red circle highlights the 'Create' button in the top-left corner of the main network list. Step 2: A red circle highlights the 'Bridge ports:' field, which contains 'enp3s0f0'. Step 3: A red circle highlights the 'OK' button at the bottom-right of the dialog.

*Une fois créé les Interfaces et les bridge s'activent automatiquement (Champs : Active=Yes)*

*Je branche une 1ere Fibre dans ce qui sera mon LAN*

*Puis avec la commande ethtool [Nom du Network Device] je cherche celui qui va monter.*

```
ethtool enp3s0f0
```

```
Settings for enp3s0f0:
  Supported ports: [ FIBRE ]
  Supported link modes:  1000baseT/Full
                         10000baseT/Full
  Supported pause frame use: Symmetric Receive-only
  Supports auto-negotiation: No
  Supported FEC modes: Not reported
  Advertised link modes:  10000baseT/Full
  Advertised pause frame use: No
  Advertised auto-negotiation: No
  Advertised FEC modes: Not reported
  Speed: 10000Mb/s
  Duplex: Full
  Port: Direct Attach Copper
  PHYAD: 1
  Transceiver: internal
  Auto-negotiation: off
  Supports Wake-on: g
  Wake-on: d
  Current message level: 0x00000000 (0)

    Link detected: yes
root@pveSmFantec:~#
```

*Idem sur l'autre porte avec ONU pluggé :*

```
ethtool enp3s0f1
root@pveSmFantec:~# ethtool enp3s0f1
Settings for enp3s0f1:
  Supported ports: [ FIBRE ]
  Supported link modes:  1000baseT/Full
                         10000baseT/Full
  Supported pause frame use: Symmetric Receive-only
  Supports auto-negotiation: No
  Supported FEC modes: Not reported
  Advertised link modes:  10000baseT/Full
  Advertised pause frame use: No
  Advertised auto-negotiation: No
  Advertised FEC modes: Not reported
  Speed: Unknown!
  Duplex: Unknown! (255)
  Port: None
  PHYAD: 1
  Transceiver: internal
  Auto-negotiation: off
  Supports Wake-on: g
  Wake-on: d
  Current message level: 0x00000000 (0)

    Link detected: no
root@pveSmFantec:~#
```

*J'utilise un G-010S-A, il faut donc lui faire la petite soudure.*

*Une fois la soudure effectué (Plus facile en enlevant le capot, mais quand même pas évident.)*

*Re-plugger le module et attendre qq seconde qu'il démarre.*

```
ethtool enp3s0f1
```

```
root@pveSmFantec:~# ethtool enp3s0f1
Settings for enp3s0f1:
  Supported ports: [ FIBRE ]
  Supported link modes:  1000baseT/Full
  Supported pause frame use: Symmetric Receive-or
  Supports auto-negotiation: No
  Supported FEC modes: Not reported
  Advertised link modes:  Not reported
  Advertised pause frame use: No
  Advertised auto-negotiation: No
  Advertised FEC modes: Not reported
  Speed: 1000Mb/s
  Duplex: Full
  Port: FIBRE
  PHYAD: 1
  Transceiver: internal
  Auto-negotiation: off
  Supports Wake-on: g
  Wake-on: d
  Current message level: 0x00000000 (0)

  Link detected: yes
root@pveSmFantec:~#
```

*Le lien est bien activé, le module est donc bien reconnu.*

*A ce stade on peu éditer les Bridges et ajouter un commentaire type : SFP-LAN , SFP-WAN pour se souvenir de qui est qui*

*Idem sur les ports de la carte Reseau, [Port Haut LAN], [Port Bas ONT]*

					Port Haut LAN
enp3s0f0	Network Device	Yes	No	No	Port Bas ONT
enp3s0f1	Network Device	Yes	No	No	SFP-LAN
vmbr4	Linux Bridge	Yes	Yes	No	SFP-WAN
vmbr5	Linux Bridge	Yes	Yes	No	enp3s0f1

*Pour le moment comme le montre la capture on est toujours en 1000Mb/s*

```
ethtool -s enp3s0f1 speed 2500 duplex full autoneg off
```

```
root@pveSmFantec:~# ethtool -s enp3s0f1 speed 2500 duplex full autoneg off
Cannot set new settings: Invalid argument
  not setting speed
  not setting duplex
  not setting autoneg
```

*Dans mon bridge vmbr5, je vais éditer les paramètres pour pouvoir me connecter sur l'ONU depuis l'hôte Pve en SSH.*

					enp3s0f1	192.168.1.9/29	SFP-WAN
vmbr5	Linux Bridge	Yes	Yes	No			

*Ensuite dans la console de Pve ou en SSH sur Pve on peut tenter de se connecter (Note a ce Stade je n'ai pas encore mis la fibre, je ne sais pas si ça peut jouer)*

*On lance la petite commande qui va bien :*

```
ssh ONTUSER@192.168.1.10
sshpass -p SUGAR2A041 ssh ONTUSER@192.168.1.10
```

*Pour rappel le mdp associé est : **SUGAR2A041***

```
root@pveSmFantec:~# ssh ONTUSER@192.168.1.10
Login fail count since last successful login: 0
ONTUSER@192.168.1.10's password:
Last successful login date and time: Date:2021-01-18 Time:23:44:01

BusyBox v1.22.1 (2018-02-07 17:12:54 CST) built-in shell (ash)
Enter 'help' for a list of built-in commands.

OpenWrt - (14.07_ltq) --- Lantiq Edition for GPON

ONTUSER@SFP:~# onu ploamsg
errorcode=0 curr_state=1 previous_state=0 elapsed_msec=4294726292
ONTUSER@SFP:~# onu lannet 0
```

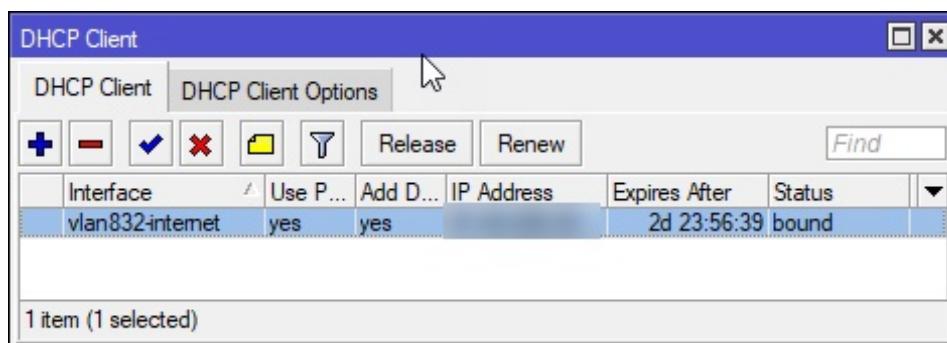

Fibre branché :

```
ONTUSER@SFP:~# onu ploamsg
errorcode=0 curr_state=5 previous_state=4 elapsed_msec=3044840
ONTUSER@SFP:~# onu ploamsg
```

N'ayant plus le NET pour le moment, je change mon bridge affecté à CHR pour qu'il point sur la carte BCM (Ca se fait en LIVE sans rebooter quoi que ce soit)

Sous WINBOX, la connexion ne revient pas d'elle même (enfin j'ai pas attendu plus de 2min)

Je vais dans Menu/IP/DHCP Client :

Un petit clique sur release et hop une nouvelle IP est récupérée côté WAN, le NET est revenu

Pendant ce temps là, je constate que je peux toujours me connecter sur mon ONU.

```
ethtool -s <ifname> speed 2500
ethtool -s enp3s0f1 speed 2500
```

```
root@pveSmFantec:~# dmesg | grep bnx2x
